Chordae Tendineae. The chordae tendineae are fibrous tendon like cords that connect to the tricuspid valve in the right ventricle and the mitral valve in the left ventricle. When the valves close the chordae tendineae prevent the cusps from swinging upwards into the atrial cavity.

Abstract. Cardiac electrophysiologists' use of the coronary sinus (CS) to map and ablate accessory pathways and implant left ventricular leads has emphasized the need for understanding CS anatomy. In this review, we briefly examine the developmental and radiological anatomy of the CS and discuss in detail the gross anatomy of this cardiac vein.

The anatomy of the coronary sinus venous system for the ...

The introduction of non-fluoroscopic electroanatomic mapping technologies has enabled electrophysiologists to interpret correctly the gross

morphology and attitudinal position of the cardiac chambers during the course of a mapping procedure.¹ Intracardiac echocardiography has also been used to visualise some endocardial structures such as the oval fossa (OF) or terminal crest (TC) and to monitor the effects of ablation.

The great veins, the superior and inferior venae cavae, and the great arteries, the aorta and pulmonary trunk, are attached to the superior surface of the heart, called the base. The base of the heart is located at the level of the third costal cartilage, as seen in Figure 1.

Cardiac anatomy is complex and its understanding is essential for the interventional arrhythmologist. The first difficulty is the terminology used to describe the location of sites of mapping and ablation. ... For many years, electrophysiologists have named these positions following the conventional electrocardiographical vocabulary, or the ...

Anatomy of Electrophysiology: Introduction. Rapid advances have been made in electrophysiologic mapping, imaging, use of catheter ablations for drug refractory arrhythmias, and transcatheter implantation of pacing leads. A better understanding of cardiac anatomy is essential to make further progress, especially in fine-tuning interventional techniques and in developing computer models of arrhythmias.
