Astrophotography: Guides, Case Studies & Equipment

Astrophotography is a genre of photography which goal is to capture astronomical objects on the night sky (well, photographing the Sun can be counted as astrophotography too, but here we will focus on the objects you can see when skies are dark).

Astrophotography for Beginners — Tips & Guide on How to Start

A German equatorial telescope mount is required for astrophotography. These mounts can be polar aligned to move move in the exact motion of the night sky. This effectively "freezes" the objects in space so that you can photograph them. It is often said that your mount is the single most important part of your astrophotography equipment.

A Basic Deep-Sky Setup for DSLR Astrophotography ...

APT stands for "AstroPhotography Tool" and it is like Swiss army knife for your astro imaging sessions. No matter what you are imaging with - Canon EOS, Nikon, CCD or CMOS astro camera, APT has the right tool for planning, collimating, aligning, focusing, framing, controlling/tethering, imaging, synchronizing, scheduling, meridian flipping, analyzing and monitoring.

APT - Astro Photography Tool

The best camera for astrophotography is a very subjective matter. If you take one camera that is best for one person, it can be the worst for another. Also, you have to match the right camera with the right telescope because every telescope has different specifications that make the given camera the best match and vice versa.
