Ethnobotany is the study of a region's plants and their practical uses through the traditional knowledge of a local culture and people. An ethnobotanist thus strives to document the local customs involving the practical uses of local flora for many aspects of life, such as plants as medicines, foods, intoxicants and clothing. Richard Evans Schultes, often referred to as the "father of ...

Only 62 of the 457 families of angiosperms and gymnosperms are used as sources for medicinal drugs . As a result of evolution, species that have a wide geographical distribution may be more able to synthesize metabolites that enable them to adapt to such a wide distribution compared with species with a restricted distribution and with a local evolutionary history.
