Experimental design (blocking, replication, and randomization) is as important in growth chamber studies as it is in greenhouse or field studies. The growth chamber provides a known, researcher-determined environment for plant studies, but this does not mean that sources of "unwanted" variation have been eliminated.

## **Ch. 13 Experimental Design - controlled environments**

In 1950, Gertrude Mary Cox and William Gemmell Cochran published the book Experimental Designs, which became the major reference work on the design of experiments for statisticians for years afterwards. Developments of the theory of linear models have encompassed and surpassed

the cases that concerned early writers.
