If any neuron in a layer (for instance, the layer of hidden units) is connected to a neuron in another layer (say, the output layer), then each hidden unit is connected to every output neuron. The arrangement of neurons into layers and the connection patterns within and between layers is called the net architecture.

Neural Networks follow different paradigm for computing. The von Neumann machines are based on the processing/memory abstraction of human information processing. The neural networks are based on the parallel architecture of biological brains. Neural networks are a form of multiprocessor computer system, with

Natural Neural Networks. • Signals “move” via electrochemical pulses, combination of electrical signals and chemical signals working together. • A neuron receives input from other neurons (maybe hundreds or even thousands) from its synapses. • The synapses release a chemical transmitter – the sum of which can cause a threshold to be reached – causing the neuron to “fire”.
