This is the first monograph on fuzzy portfolio optimization. By using fuzzy mathematical approaches, quantitative analysis, qualitative analysis, the experts' knowledge and the investors' subjective opinions can be better integrated into portfolio selection models. The contents of this book mainly comprise of the authors' research results for fuzzy portfolio selection problems in recent years.

Proposed two fuzzy portfolio optimization models which bases on the Markowitz Mean-Variance (MV) approach. The first model serves as an extension of MV optimization, using trapezoidal fuzzy numbers to describe securities parameters. The model returns fuzzy numbers of optimized portfolio expected return and variance.

fuzzy portfolio optimization is implemented and its re-sults will be discussed. Therefore; the main aim of this research is to present a fuzzy model for portfolio opti-mization with the use of mean absolute deviation risk function and for more clarity of the subject at hand a few instances from empirical studies conducted in this field

Presenting a Fuzzy Model for Fuzzy Portfolio Optimization ...

Employing fuzzy multiobjective linear programming, optimization is performed using seven objective functions viz., return, risk, relative strength index (RSI), coefficient of variation (CV), earnings yield (EY), price to earnings growth ratio (PEG ratio), and AHP weighted score.

Optimization of Risk and Return Using Fuzzy Multiobjective ...

To find the optimal asset allocation in each cluster we develop a hybrid model of optimization and fuzzy based on return rates, variance. This was done by maximizing the fuzzy return for a tolerable fuzzy risk and minimizing the fuzzy risk for a desirable fuzzy return separately at different confidence levels. We focus on the equity mutual funds offered by three Malaysian banks, namely Public Bank Berhad, CIMB, and Malayan Banking Berhad.
