Ionic and molecular compounds are both made of bonds. They are both formed with a nonmetal. Both contain atoms that want 8 valence e- (except for Hydrogen and Helium). Ionic compounds can be solid crystals, have high melting/boiling points, strongest bonds, and are formed with a metal and nonmetal.

Chemical Bonds I: Covalent - Study.com

Covalent bonds form between nonmetals and elements close to each other in the periodic table. Covalent bonds can vary in length (measured by the distance between nuclei), but in general the shorter the bond, the stronger the bond. Both ionic and covalent bonding are examples of intramolecular forces.
