A simple rule of thumb for smaller steam piping (6" and below) is to keep steam velocities below 10,000 feet/minute (165 feet/second) for short lengths of pipe only. The length of the steam line between X and A is 1000 feet, so the simple rule of thumb can not be applied here because the pressure drop will be too high.

Steam Engineering Basics 3 When considering the volume of a pound of steam, consider that a pound of water has a volume of only 0.016 cubic feet. Therefore, even at 200 psia, when water turns into steam, its volume increases by about 14 times. You can see that if you can use the cold sea-water as the lowest temperature, say 60 °F, the
