We've already seen module-based solutions from the likes of Assan and there are rumors that the Corona 2.4GHz modules are not too far away from general release -- and then there's the iMax 9X, a full-featured 9-channel RC set that is available in regular narrowband or 2.4GHz versions.

Review: FlySky, Turnigy, iMax 9X 2.4GHz radio control set

The Tunigy 9X I have is a version 2, there is now an in-built 2.4GHz antenna and the new system looks little different to the older version. The 2.4GHz side of things is vastly improved over the original system (pending flight tests to confirm that). It's now a frequency hopper at an incredibly low price.

Review: Turnigy 9X Version 2 SOMETHING OLD, SOMETHING NEW. Dated: 22 June 2010. One of the first products I ever reviewed here was the original iMax/FlySky 9X RC system. Well now Hobby King is selling what they call "Version 2" of this product and it comes with a dirt-cheap price plus the new frequency-hopping RF module and receiver from FlySky (albeit with the Turnigy branding).

The included 8 CH receiver will come in handy for my tricopter build. It's only day 2 and I'm starting to understand the menus. It's identical to the Turnigy 9x. Hobby King sells the Turnigy for less - until you add the shipping and handling and the headache of fighting with customer no-service and Chinese shipping times!

The 2.4ghz transmitter module looks strikingly similar to my FS-GT3 car transmitter FS-GT3. It's an FS-TM0001 too. It looks like the modules are the same and you can just take it out and plug it into any 9X or GT3 transmitter. So for those people who already have a FS-GT3 3CH pistol grip radio, you can just buy a hollow Turnigy 9X and plug it in. I wish I had known this before hand.
